

Intensive Care Unit

The Intensive Care Unit at Phelps County Regional Medical Center is an 18-bed unit, completely new in 2006. ICU cares for the most critically ill patients, and all nurses have to have special training to work with these patients, including ACLS, ECG, PALS TNCC and critical care classes. Currently there is a 2:1 patient/nurse ratio.

Each room has state-of-the-art equipment, including “ceiling arm” technology that allows treatment modalities to be centrally located for convenient use and movement. Medications for patients are delivered to locked cabinets right outside the room at the nurse’s pod. EMR is utilized in the ICU, including POM and BMV.
